Series Statement

Series Name: Uniform Crime Reporting Program Data Series

Series Information: Since 1930, the Federal Bureau of Investigation (FBI) has compiled the Uniform Crime Reports (UCR) to serve as periodic nationwide assessments of reported crimes not available elsewhere in the criminal justice system. With the 1977 data, the title was expanded to Uniform Crime Reporting Program Data. Each year, participating law enforcement agencies contribute reports to the FBI either directly or through their state reporting programs. ICPSR archives the UCR data as five separate components: (1) summary data, (2) county-level data, (3) incident-level data (National Incident-Based Reporting System [NIBRS]), (4) hate crime data, and (5) various, mostly nonrecurring, data collections. Summary data are reported in four types of files: (a) Offenses Known and Clearances by Arrest, (b) Property Stolen and Recovered, (c) Supplementary Homicide Reports (SHR), and (d) Police Employee (LEOKA) Data (Law Enforcement Officers Killed or Assaulted). The county-level data provide counts of arrests and offenses aggregated to the county level. County populations are also reported. In the late 1970s, new ways to look at crime were studied. The UCR program was subsequently expanded to capture incident-level data with the implementation of the National Incident-Based Reporting System. The NIBRS data focus on various aspects of a crime incident. The gathering of hate crime data by the UCR program was begun in 1990. Hate crimes are defined as crimes that manifest evidence of prejudice based on race, religion, sexual orientation, or ethnicity. In September 1994, disabilities, both physical and mental, were added to the list. The fifth component of ICPSR's UCR holdings is comprised of various collections, many of which are nonrecurring and prepared by individual researchers. These collections go beyond the scope of the standard UCR collections provided by the FBI, either by including data for a range of years or by focusing on other aspects of analysis.

Abstract

The Uniform Crime Reporting Program Data, Police Employee Data, 2013 file contains monthly data on felonious or accidental killings and assaults upon United States law enforcement officers acting in the line of duty. The Federal Bureau of Investigation (FBI) assembled the data and processed them from UCR Master Police Employee (LEOKA) data tapes.

Each agency record included in the file includes the following summary variables: state code, population group code, geographic division, Metropolitan Statistical Area code, and agency name. These variables afford considerable flexibility in creating subsets or aggregations of the data.

Since 1930, the Federal Bureau of Investigation has compiled the Uniform Crime Reports (UCR) to serve as a periodic nationwide assessment of reported crimes not available elsewhere in the criminal justice system. Each year, this information is reported in four types of files: (1) Offenses Known and Clearances by Arrest, (2) Property Stolen and Recovered, (3) Supplementary Homicide Reports (SHR), and (4) Police Employee (LEOKA) Data. The Police Employee (LEOKA) Data provide information about law enforcement officers killed or assaulted (hence the acronym, LEOKA) in the line of duty. The variables created from the LEOKA forms provide in-depth information on the circumstances surrounding killings or assaults, including type of call answered, type of weapon used, and type of patrol the officers were on.

Summary Data Description

Time Period: 2013

Date(s) of Collection: 2013

Country: United States

Geographic Coverage: US states, counties, cities

Unit of Analysis: Law enforcement agencies

Universe: Law enforcement officers killed or assaulted as reported by law enforcement agencies.

Kind of Data: Aggregate Data

Notes

The Uniform Crime Reporting Program (UCR) is a data collection effort designed to provide an overall view of crime in the United States. The LEOKA data are a component of this. UCR data housed at the Inter-university Consortium for Political and Social Research (ICPSR) include: OFFENSES KNOWN AND CLEARANCES BY ARREST (also known as RETURN A), PROPERTY STOLEN AND RECOVERED (also known as SUPPLEMENT TO RETURN A), SUPPLEMENTARY HOMICIDE REPORTS (SHR), and POLICE EMPLOYEE (LEOKA) DATA. The UCR data for 1975-1997 are archived under ICPSR study number 9028. Starting with the 1998 UCR data each of the main data files comprising the UCR has been given its own ICPSR study number. New study numbers will be issued each year for OFFENSES KNOWN AND CLEARANCES BY ARREST, PROPERTY STOLEN AND RECOVERED, SUPPLEMENTAL HOMICIDE REPORTS, and POLICE EMPLOYEE (LEOKA) DATA. Each UCR data file, regardless of year or study number, has its own documentation specific to it.

Methodology and Processing

Data Collection Methodology

Time Method: Cross-section

Data Collector: United States Department of Justice. Federal Bureau of Investigation

Frequency of Data Collection: Monthly

Mode of Data Collection: Mail-in Forms

Type of Research Instrument: Structured

Characteristics of Data Collection Situation:
UCR Program contributors compile and submit their crime data by one of two means: either directly to the FBI or through their state UCR Programs. State UCR programs frequently impose mandatory reporting requirements which have been effective in increasing both the number of reporting agencies as well as the number and accuracy of each participating agency's reports.

The LEOKA dataset contains information collected through two UCR Program reporting forms: the annual "Law Enforcement Employees Report" and the monthly "Law Enforcement Officers Killed or Assaulted" (LEOKA) report. Together they represent the FBI's effort to produce a comprehensive dataset of assaults on police officers and, more generally, of "police strength" (the amount of resources devoted to policing as measured by the number of persons employed in law enforcement agencies).

The Law Enforcement Employees Report, a form sent to police agencies throughout the country by the FBI once a year, asked for a count of employees on the payroll of each agency as of October 31. The number of full-time law enforcement employees, officers and civilians, was requested by this form. Officers are defined as full-time, sworn personnel with full arrest powers including the chief, sheriff, or other head of the department. Persons performing guard or protection duties, such as school crossing guards, special officers, and merchant police, who were not paid from law enforcement funds were not included. Civilian employees include persons such as clerks, radio dispatchers, parking enforcement personnel, stenographers, mechanics, etc., who were full-time employees of the agency. Employees, both officers and civilians, who were on leave with pay also were included.

Information from the LEOKA report constitutes the second and largest portion of the dataset. For any month in which felonious or accidental killings and/or nonfatal assaults on law enforcement officers acting in the line of duty were reported on the UCR Return A form, a LEOKA form was to have been submitted to provide additional information regarding the attack. (See ICPSR 4124, UNIFORM CRIME REPORTING DATA [UNITED STATES]: OFFENSES KNOWN AND CLEARANCES BY ARREST, 2003 for a description of Return A). Monthly variables are coded zero for months in which no assaults occurred.

The LEOKA form gathered data on assaults that resulted in serious injury or in which a weapon was used that could have caused serious injury or death. Other assaults not resulting in injury were included, if they involved more than verbal abuse or minor resistance during the course of an arrest. Details are available on the number and type of patrols and shift assignments, the number of injury and non-injury assaults by type of weapon, and the number of weapon-specific assaults by situation type. These situations include disturbance calls, burglaries, robberies, other arrests attempted, civil disorders, custody of prisoners, suspicious persons, ambushes without warning, mentally deranged persons, traffic pursuits and stops, and all other circumstances. For each of these categories, the number of police assaults cleared by arrest (or other exceptional means) are also included. The final group of variables are assault counts by time of occurrence (in two-hour increments, e.g., the number of assaults occurring between 12:01am and 2:00am, 2:01am and 4:00am, and so on).

Control Operations: Once received, the FBI checks the agencies' reports for completeness and arithmetical accuracy. If an unusual fluctuation is detected in an agency's crime count, the FBI compares those counts with counts from previous reports or compares the frequencies to those of agencies similar to the agency in question. When necessary, law enforcement agencies are contacted to correct or explain the figures.

Data Use Statement:

Citation Requirement: Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications.

Deposit Requirement: To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR Web site for more information on submitting citations.

Extent of Processing Checks: The data collection was processed according to standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were resolved or recoded to missing data. No consistency checks were performed.

Missing Data: Starting with the 1998 data, ICPSR did not recode blanks or system missing data to standardized values. Users should note that blanks and missing data may have a substantive meaning under the FBI coding scheme. Users should refer to the documentation for explanation of individual variables.

Variable Description

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

V65 - MONTH INCLUDED

Location: 158-159 (width: 2; decimal: 0)

Variable Type: numeric

Text:
Prior to 1971, this field will always be "01." This is the highest "valued" month that was reported for the year by the submitting agency. For example, if October was the last month submitted or is the only month submitted, "10" would be the value. This value also can be used to stop processing once October ("10") has been processed. May be used as a loop control to exit search when no more identifiable data exist to record.

Again, the value does not mean that there are necessarily 10 full months reported. It does meant that the tenth month is the last month reported on the return for the year.
