Series Statement

Series Name: Uniform Crime Reporting Program Data Series

Series Information: Since 1930, the Federal Bureau of Investigation (FBI) has compiled the Uniform Crime Reports (UCR) to serve as periodic nationwide assessments of reported crimes not available elsewhere in the criminal justice system. With the 1977 data, the title was expanded to Uniform Crime Reporting Program Data. Each year, participating law enforcement agencies contribute reports to the FBI either directly or through their state reporting programs. ICPSR archives the UCR data as five separate components: (1) summary data, (2) county-level data, (3) incident-level data (National Incident-Based Reporting System [NIBRS]), (4) hate crime data, and (5) various, mostly nonrecurring, data collections. Summary data are reported in four types of files: (a) Offenses Known and Clearances by Arrest, (b) Property Stolen and Recovered, (c) Supplementary Homicide Reports (SHR), and (d) Police Employee (LEOKA) Data (Law Enforcement Officers Killed or Assaulted). The county-level data provide counts of arrests and offenses aggregated to the county level. County populations are also reported. In the late 1970s, new ways to look at crime were studied. The UCR program was subsequently expanded to capture incident-level data with the implementation of the National Incident-Based Reporting System. The NIBRS data focus on various aspects of a crime incident. The gathering of hate crime data by the UCR program was begun in 1990. Hate crimes are defined as crimes that manifest evidence of prejudice based on race, religion, sexual orientation, or ethnicity. In September 1994, disabilities, both physical and mental, were added to the list. The fifth component of ICPSR's UCR holdings is comprised of various collections, many of which are nonrecurring and prepared by individual researchers. These collections go beyond the scope of the standard UCR collections provided by the FBI, either by including data for a range of years or by focusing on other aspects of analysis.

Abstract

The UNIFORM CRIME REPORTING PROGRAM DATA: OFFENSES KNOWN AND CLEARANCES BY ARREST, 2012 dataset is a compilation of offenses reported to law enforcement agencies in the United States. Due to the vast number of categories of crime committed in the U.S., the FBI has limited the type of crimes included in this compilation to those crimes which people are most likely to report to

police and those crimes which occur frequently enough to be analyzed across time. Crimes included are criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny-theft, and motor vehicle theft.

Much information about these crimes is provided in this dataset. The number of times an offense has been reported, the number of reported offenses that have been cleared by arrests, and the number of cleared offenses which involved offenders under the age of 18 are the major items of information collected.

Notes

The Uniform Crime Reporting Program (UCR) is a data collection effort designed to provide an overall view of crime in the United States. Data for the UCR have been gathered by the Federal Bureau of Investigation (FBI) since 1930. The data are compiled from law enforcement agencies on a monthly basis. UCR data housed at the Inter-university Consortium for Political and Social Research (ICPSR) include: OFFENSES KNOWN AND CLEARANCES BY ARREST (also known as RETURN A), PROPERTY STOLEN AND RECOVERED (also known as SUPPLEMENT TO RETURN A), SUPPLEMENTARY HOMICIDE REPORTS (SHR), and POLICE EMPLOYEE (LEOKA) DATA. The UCR data for 1975-1997 are archived under ICPSR study number 9028. Starting with the 1998 UCR data each of the main data files comprising the UCR has been given its own ICPSR study number. New study numbers will be issued each year for OFFENSES KNOWN AND CLEARANCES BY ARREST, PROPERTY STOLEN AND RECOVERED, SUPPLEMENTAL HOMICIDE REPORTS, and POLICE EMPLOYEE (LEOKA) DATA. Each UCR data file, regardless of year or study number, has its own documentation specific to it.

Methodology and Processing

Data Collection Methodology

Time Method: cross-section

Data Collector: United States Department of Justice. Federal Bureau of Investigation

Frequency of Data Collection: monthly

Mode of Data Collection: self-enumerated questionnaire

Characteristics of Data Collection Situation: The data for OFFENSES KNOWN AND CLEARANCES BY ARREST are submitted voluntarily by city, county, and state law enforcement agencies. Some agencies receive forms directly from the FBI and return them directly to the FBI. Many others receive forms from state collecting programs and return these forms to those programs. The state programs, in turn, forward the reports to the FBI. Reports are sent out and collected on a monthly basis.

Control Operations: Once received, the FBI checks the agencies' reports for completeness and arithmetical accuracy. If an unusual fluctuation is detected in an agency's crime count, the FBI compares those counts with counts from previous reports or compares the frequencies to those of agencies similar to the agency in question. When necessary, law enforcement agencies are contacted to correct or explain the figures.

Data Use Statement:

Citation Requirement: Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications.

Deposit Requirement: To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR Web site for more information on submitting citations.

Extent of Processing Checks: The data collection was processed according to standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were resolved or recoded to missing data. No consistency checks were performed.

Missing Data: Starting with the 1998 data, ICPSR did not recode blanks or system missing data to standardized values. Users should note that blanks and missing data may have a substantive meaning under the FBI coding scheme. Users should refer to the documentation for explanation of individual variables.

Notes

Please note that the following variables have been discontinued: JUVENILE AGE LIMIT LAST CENSUS POPULATION - 1 to LAST CENSUS POPULATION - 3 POPULATION SOURCE OLD POPULATION GROUP The variables COVERED BY GROUP, LARCENY UNDER $50.00 and UNUSED have been excluded from the dataset. In addition, please note that the code descriptions for the internal F.B.I. audit variables for each month, LAST UPDATE, CARD 0 TYPE, CARD 1 TYPE, CARD 2 TYPE, CARD 3 TYPE, and CARD 4 TYPE, have specialized meanings within the FBI audit system. "Adjustment" does not necessarily mean that figures were corrected or revised. Data are said to be "adjusted" whenever initially submitted information is overwritten in the F.B.I. files, including instances where "old data" are overwritten with identical "new data".

Variable Description

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Text:
Total population of the jurisdiction, or if the city is located in more than one county, the population of the jurisdiction within the county that contains the largest component of the jurisdiction's population.

Population data are reported in three separate fields. The three population fields are used because some city agencies are located in as many as three different counties. [Note: Only city agencies (groups 1-7) can be located in more than one county. County agencies (groups 8-9) and possessions (group 0) cannot cross county boundaries. "Agency" is synonymous with "jurisdiction".]

For agencies located in only one county, the population 1 field contains the total population of the jurisdiction, the county 1 field contains the code for the county in which the agency is located, and the MSA 1 field contains the code of the MSA (if any) in which the agency is located. The remaining population, county, and MSA fields (2 and 3) are filled with zeros.

For city agencies residing in more than one county, data are reported for the component counties by population size from largest to smallest. The first set of fields contains information for the county with the largest component of the jurisdiction's population. The second set of fields contains information for the county with the second largest component of the jurisdiction's population. The third set of fields contains information for the county with the third largest component of the jurisdiction's population.

The total population of the jurisdiction is always equal to the sum of the three population variables.
